

Controlling Quality of HTML Output

It currently ~~is not yet bug-free~~: we have found problems .

HTML text contains

references to the fonts used of the original document. If these are not known to the browser (a fat chance!), it will replace them with his assumptions, which probably will let the result look awkward.

HTML text contains references to the fonts used of the original document. If these are not *known to the browser* (a fat chance!), it will replace them with his assumptions, which probably will let the result look awkward.
